Coil Hook (C-hook)

Product information

The Certex range of C-Hooks are designed to assist in the handling steel coils. With individual coils, the fork length is about 75% of the maximum width of the coil. This reduces the space required behind the coil hook. For lifting one or more small coils, the fork length is the same as the full width of the coil. The top of the fork and the inside of the back can be fitted with Secutex polyurethane anti-scuff protection that can be screwed or clamped into position. For storage, the coil hooks can be equipped with a support or a separate stand.
